

Runway Voice

Ask your cash flow anything.

A voice-first cash copilot for SMB founders, built on AssemblyAI.

The problem

Cash is the question founders ask most - and answer least

- Cash-flow problems are the most-cited killer of small businesses (U.S. Bank study: 82% of failures).
- The numbers exist - but they sit in a spreadsheet the founder opens once a month.
- Existing FP&A tools are priced and built for finance teams, not for a founder between meetings.
- The result: hiring, pricing and payment decisions get made on gut feel.

The solution

A voice agent over a finance-grade 13-week cash model

- Ask by voice: runway, burn, overdue invoices, vendor bills - answered in seconds.
- Run what-if scenarios conversationally: hire, lose a client, a late payer, cost cuts.
- Under the hood: the direct-method 13-week forecast used in professional FP&A and turnaround work.
- Every answer comes with the number, the trajectory, and the action that matters most.

How it works

Voice in, decision out

Live demo

Real questions, real numbers (fictional demo company)

Q: What is our runway?

A: Cash stays positive for the full 13-week window. Lowest point is EUR 179,130; week-13 cash is EUR 228,415.

Live demo

Real questions, real numbers (fictional demo company)

Q: What happens if we hire an engineer?

A: Scenario: Hire one senior engineer at EUR 7,500/week fully loaded, starting week 3. Week-13 cash would be EUR 145,915 (EUR -82,500 vs. base), lowest point EUR 145,915, and cash stays positive across all 13 weeks.

Why AssemblyAI

The voice layer this use case needs

- Universal speech-to-text handles founder-speak: accents, numbers, company names.
- Fast turnaround keeps the conversation at the speed of thought - no typing, no menus.
- One API for the whole voice layer lets the product stay focused on the finance model.
- Streaming path is ready: the same intent engine works over Universal-Streaming for real-time Q&A.

Business value

A wedge into the SMB finance stack

- 400M+ small businesses worldwide; cash visibility is their most universal pain.
- Enterprise FP&A suites start at thousands per month - nothing serves the founder segment at EUR 29/mo.
- Wedge expansion: accounting-ledger sync (DATEV, Xero, QuickBooks) turns Q&A into a weekly voice brief.
- Retention is structural: the model compounds value as it learns each company's cash rhythm.

Roadmap

From demo to daily habit

- Now: voice Q&A + scenarios over a 13-week model (this submission).
- Next: live ledger and bank sync, replacing the demo dataset.
- Then: proactive weekly voice brief - the copilot calls the founder before Monday.
- Later: multi-entity consolidation and German/English bilingual voice.

Cash clarity at the speed of speech.

Domain logic by a 16-year FP&A operator (PepsiCo, Hilti, Delivery Hero).
Voice by AssemblyAI. Built for the AssemblyAI Voice Agent Hackathon 2026.
